

ALTIKA

Spectral way for enhancement of occupational visional tasks: Computer users, pilots, drivers...

Optical company Lornet-M produces:

“Ozone” high-tech sun glasses

- ?? Eye protection to light damage and early ageing of eye structures (cornea, crystalline lens, retina)
- ?? Improved contrast and sharpness of visual perception
- ?? Enhancement of colour discrimination
- ?? Better viewing comfort

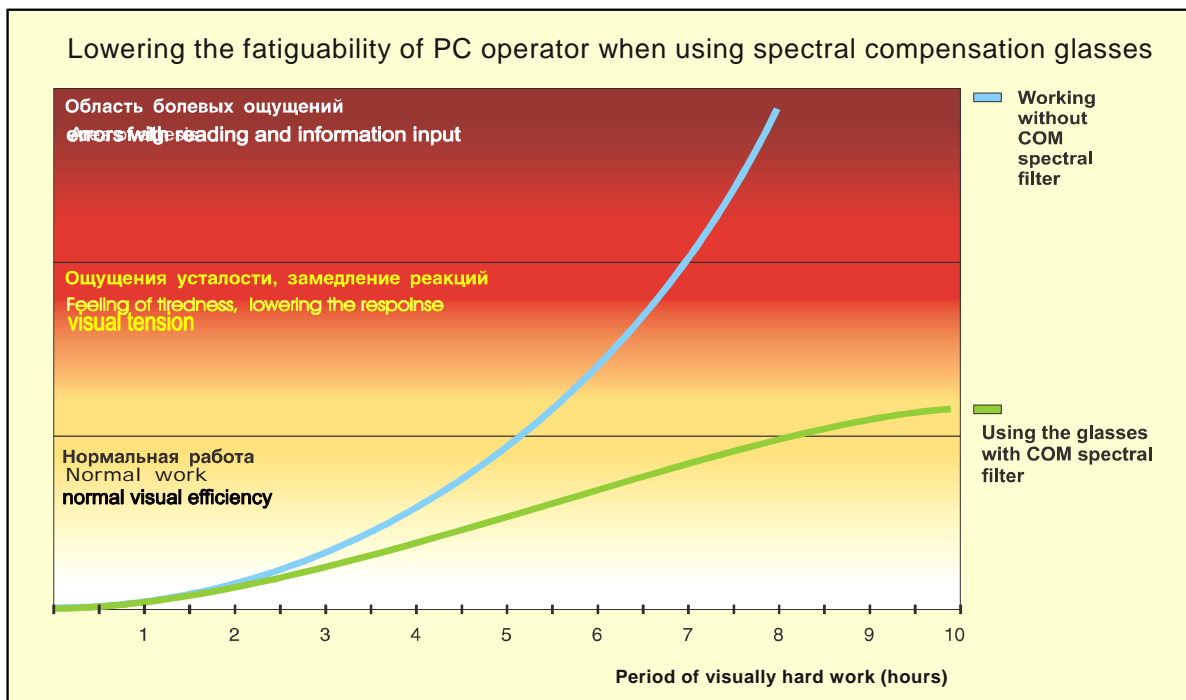

COM glasses for protection to computer vision syndrome of computer users

The glasses have a filtering spectral covering for:

- ?? Protecting the eye from early ageing
- ?? Prevention of eye diseases like cataract, nebula, etc.
- ?? Relieving the eye tension, myopia prevention
- ?? Upgrading the eye function, the capacity for work
- ?? Preserving the PC operator's health
- ?? Enhancement of colour discrimination

Visual efficiency
